

As soon as you launch the app you will see following options

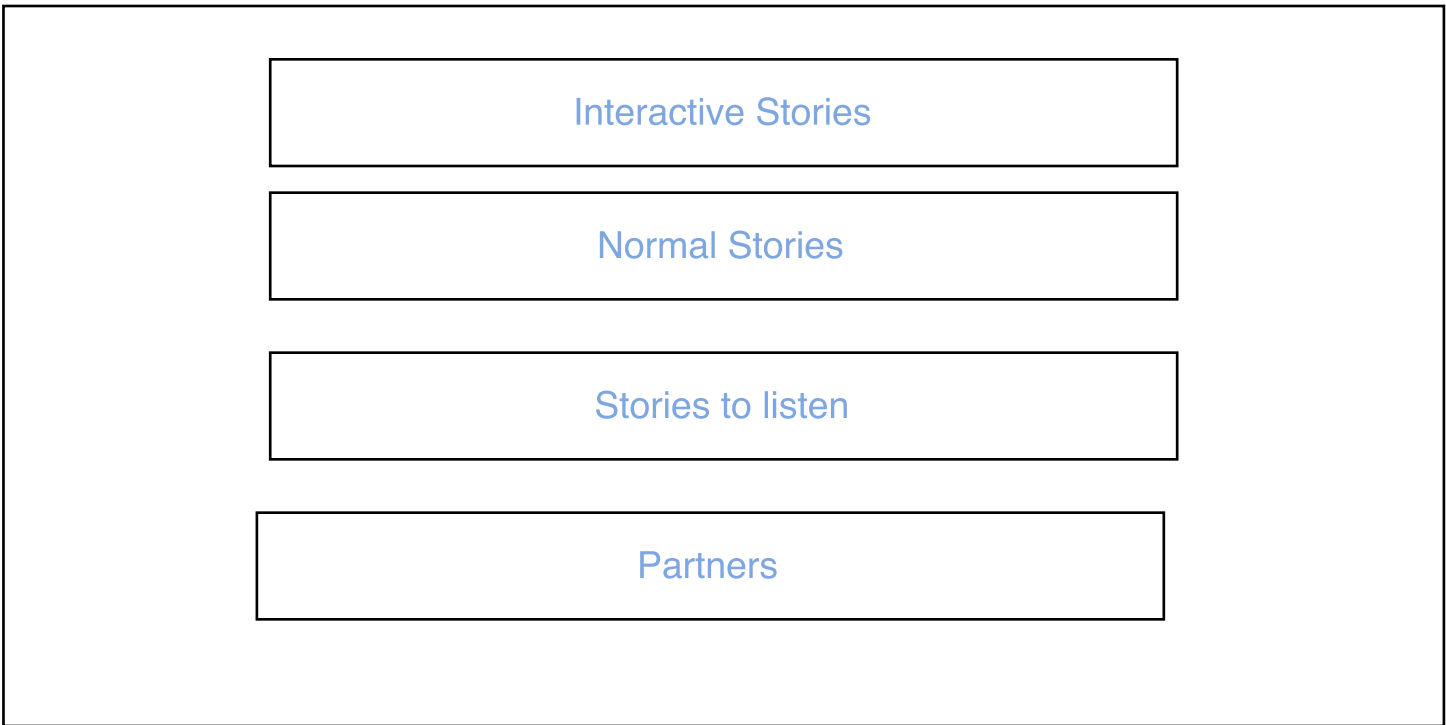

When you select any package ,it will ask you to enter code to activate the package e.g you selected package 1

Enter the promo code

This option to enter the promo code will display on the same UI not on a separate page

Now you have to add a new button e.g package 4 in the current UI as you see above . When user clicks on package 4 ,then it should asked to enter the promo code to activate the package 4 . On successfully entering the promo code .Then package 4 will get activated and user will see following options in the UI

Now , let say if the user selected the Interactive Stories .Then ,user should asked to select the language in which he wants to see the interactive story Or you can make one language default e.g German as soon as user clicks on Interactive Story .Then on the top or somewhere there should be option to change the language .Only 3 languages are required .

Interactive story:
It should be a story with illustrations and text (text should be able to change in other languages - turkish, croatian, german). It should include simple interactions like in the Dino App - we have a bear which goes to the doctor and the doctor looks into his mouth and maybe the kid has to put some medicine in the mouth for example. So each "page" would include maybe one-two interactions which we would define exactly in the storyboard. Also we maybe plan to have 3 more interactive stories, so the offer should maybe also include the option of adding more interactive stories!

Normal Story : These are plan text stories with no animations

Stories to listen : These are audio files to listen the stories.Audio files will be sent to you.It might be in mp4 format

Partners : Simple text with some description regarding sponsorship or etc
